

Ganesh Talluri

+1 (813) 705-3155 | tganesh1502@gmail.com | LinkedIn

Professional Summary

- Innovative full stack developer skilled in React, Spring Boot, Next.js, Angular, and Node.js, with hands-on experience in AWS, API integrations, Docker, CI/CD pipelines, and testing. Known for strong problem-solving, teamwork, and adaptability, passionate about building scalable, user-focused applications and leveraging AI to deliver impactful business solutions.

Work Experience

Bank of America

Charlotte, NC

Software Engineer II

Sep 2025 – Present

- Developed full-stack features for BSA/AML Red Flag Applicability and Suspicious Activity Monitoring coverage workflows within the GFC's and Coverage control Monitoring platform.
- Built scalable, state-driven frontend interfaces using React, Redux, Material UI, React Hook Form, and virtualized components with React Window to efficiently handle large enterprise datasets.
- Implemented RESTful backend services using Spring Boot, Java, and SQL to support data ingestion, validation, and persistence across compliance workflows.
- Integrated frontend and backend systems through secure API integrations, ensuring consistent state management, role-based access control, and audit-ready data flows.
- Enabled regulatory reporting by implementing export-to-Excel functionality using ExcelJS for structured extraction of grid and tabular data.
- Collaborated closely with business stakeholders to translate business requirements into technical solutions while adhering to regulatory and governance standards.

ReplyQuickAI

Remote, USA

Software Developer Intern

Jul 2025 – Sep 2025

- Built and enhanced a modern telecom platform using VoIP, UCaaS, and multi-channel messaging to help service businesses capture and respond to leads in real time.
- Developed intelligent communication features such as Live AI Voice Agents, Missed Call Text Rescue, and outbound campaigns using GPT-4o, Twilio, Supabase, Next.js, and Node.js.
- Designed and implemented full-stack workflows for real-time booking, automated responses, and CRM integration to improve lead conversion efficiency.
- Delivered scalable, high-performance frontend components using Next.js and Tailwind CSS, collaborating closely with the founder and engineering team in agile sprints to improve reliability and scalability.

Deloitte USI

Hyderabad, India

Software Engineer

Jul 2021 – Jul 2023

- Revamped a legacy claims platform by building a react-based frontend with 20+ reusable components and integrating 15+ REST APIs, resulting in a reduction of daily claims processing time by up to 4 hours.
- Designed and implemented backend modules using Spring Boot, Hibernate, and SQL to optimize data handling; these efforts lowered latency by 15% and increased data throughput for large transactional workloads.
- Created and executed a robust automated testing strategy using JUnit and Cypress, consistently achieving over 85% code coverage and ensuring smooth deployments on CI/CD pipelines.
- Managed AWS infrastructure (Lambda, EC2, S3) supporting 150+ enterprise applications, implementing monitoring and incident response processes that increased system uptime to 99.9% and accelerated issue resolution by 20%.

- Collaborated with cross-functional teams including QA, DevOps, and business analysts to ensure technical solutions aligned with customer needs, compliance requirements, and performance standards.

Technical Skills

Frontend: React, Angular, Next.js, HTML, CSS, Redux, Tailwind CSS, Material UI, Cypress

Backend: Spring Boot, Node.js, Express.js

Languages: JavaScript, TypeScript, Java, Python, SQL, OOP

Cloud/DevOps: AWS (Lambda, EC2, S3), Docker, Kubernetes, Jenkins, Terraform, CI/CD

Databases: PostgreSQL, MySQL, MongoDB, Cassandra

Tools: Git, Postman, Jira, Confluence, Tableau, Power BI, Python (pandas, seaborn)

APIs: REST, OpenAI APIs, Gemini AI

Other: Agile, Performance Optimization, Debugging, Code Reviews

Education

University of South Florida, Tampa, FL

Aug 2023 – May 2025

MS in Computer Systems Analysis

GPA: 3.94/4.00

Projects

AI Finance Platform Next.js, Prisma, Supabase(Postgres), Clerk, Gemini AI, Arcjet

- Developed a full-stack finance application to track and consolidate multi-account spending. Integrated Gemini Vision Pro to scan receipts and generate AI-powered financial insights.
- Implemented secure authentication with Clerk and built backend services using Prisma and Supabase. Added Arcjet for security hardening and deployed the solution to Vercel for global availability.

AI Recipe App React, Tailwind, Node.js, MongoDB, Spoonacular AI API

- Created a dynamic meal planning web app that suggests recipes based on available ingredients using the Spoonacular API. Enabled JWT authentication with bcrypt for secure user access and role management.
- Designed a responsive frontend in React and Tailwind CSS and built the backend in Node.js and MongoDB. Deployed the frontend to Vercel and backend to Render for hosting.

JPMorgan Chase Software Engineering (Forage) Java, Spring Boot, Kafka, JPA, H2

- Developed Spring Boot services with Kafka consumers to process and validate real-time transactions efficiently, minimizing latency.
- Built RESTful APIs for balance inquiries and transaction tracking, using JPA with H2 in-memory database for streamlined development and testing.

Accomplishments

- Awarded two **Spot Rewards** at Deloitte for delivering high-quality technology solutions ahead of schedule. Recognized for problem-solving skills, teamwork, and measurable performance improvements.
- Recognized by the Founder of ReplyQuick.ai for driving the N4 (Outbound SMS Campaigns) module, delivering scalable, high-impact features critical to platform stability and growth, while demonstrating strong ownership, proactive problem-solving, cross-team collaboration, and consistent delivery of high-quality work under tight timelines.
