EDUCATION

University of South Florida, Tampa.

Master of Science, Business Analytics, and Information Systems.

Aug 2023 – May 2025

GPA – 3.93/4

National Institute of Technology Warangal.

Bachelor of Technology, Chemical Engineering.

July 2017 – May 2021

CGPA - 8.06/10

SKILLS

Programming Languages: Java, C++, Python, JavaScript, C#, R. **Frameworks:** Angular, Spring, .NET. **Data Science:** Machine Learning, Deep Learning. **Databases:** Postgres, MongoDB, MySQL. **Cloud Technologies:** AWS, Docker, Terraform. **Web Technologies:** HTML, CSS. **Version Control:** GitHub. **Big Data Technologies:** Cassandra, Hadoop, Spark. **Analytical Tools:** Power BI, Tableau, R Studio, Python (Seaborn, Matplotlib). **Software Practices:** Microservices, Agile, DSA.

WORK EXPERIENCE

Deloitte USI, Business Technology Analyst

July 2021 – July 2023

- Worked for a leading healthcare service provider to modernize their legacy insurance claims platform by developing a dynamic single-page application using Angular 10. Designed reusable components, integrated frontend with backend APIs via GET and POST calls, and implemented custom filters, material UI, reactive forms, and mixins to create a custom theme for consistent styling. Independently handled 40-45% of the frontend development work, reducing claims processing time to approximately 4 hours daily and enhancing user experience.
- Collaborated with DevOps teams to streamline CI/CD pipelines, contributing 300+ Git changes with efficient version control and deployment practices. Ensured robust application performance and code quality through rigorous testing and continuous integration, supporting seamless production rollouts.
- Worked as a Cloud Engineer managing AWS infrastructure for a leading healthcare client, supporting 250+ applications and 15,000+ servers. Used ServiceNow for incident management and Datadog for monitoring to resolve issues related to Lambda, S3, EC2, and resource optimization. Streamlined workflows to improve efficiency, reduce downtime, and ensure reliable, high-performing cloud operations.

PROJECTS

- Developed a full static website for finding rightful apartments for students in USF where I created a dashboard to compare prices with other apartments, included Map feature, and CRUD functionality for this responsive website, and hosted it on azure. [Link to website](#)
- Tampa Bay Unemployment Rate Dashboard: Developed an interactive Tableau Public dashboard showcasing unemployment trends from 1990 to 2023 across eight counties in the Tampa Bay region. Pre-processed unemployment and population data using Python, then created visualizations in Tableau to provide key insights into regional employment patterns. [Link to Dashboard](#)
- Developed a sophisticated algorithm that can predict the resale price of cars with high accuracy, factoring in a comprehensive set of car features and market data to assist sellers in setting fair and competitive prices. Created an end-to-end product by integrating machine learning models into the full-stack application. Ensemble techniques like stacking and voting are used. Tools: Python, (RF, MLP, GB regressors for price prediction) and Cosine similarity for recommendation, Postgres, selenium & beautiful soup (for data scrapping), JS, HTML, CSS.

ACCOMPLISHMENTS

- Achieved Spot reward by completing project deliverables with accuracy and efficiency using Angular and achieved one more Spot reward for effectively helping in AWS cloud Infrastructure and contributing towards firm initiative at Deloitte USI.
