WORK EXPERIENCE

Deloitte, Business Technology Analyst

July 2021 – July 2023

- Modernized a legacy insurance claims platform for a healthcare provider by developing a dynamic single-page application using Angular 10. Designed reusable components, integrated frontend with RESTful APIs, and implemented custom filters, Material UI, reactive forms, and mixins, reducing claims processing time by ~4 hours daily and enhancing the user experience. Independently handled 35-40% of frontend development.
- Developed 25% of the backend using Spring Boot, creating APIs and business logic for efficient frontend-database communication. Wrote 40+ JUnit tests, achieving 85% code coverage, and improved database response times by ~20% with native queries. Collaborated with DevOps teams on CI/CD pipelines, contributing 300+ Git changes, ensuring high code quality, and supporting seamless production rollouts.
- Worked as a Cloud Engineer managing AWS infrastructure for a leading healthcare client, supporting 250+ applications and 15,000+ servers. Used ServiceNow for incident management and Datadog for monitoring to resolve issues related to Lambda, S3, EC2, and resource optimization. Streamlined workflows to improve efficiency, reduce downtime, and ensure reliable, high-performing cloud operations.

SKILLS

Programming Languages:	Java, C++, Python, JavaScript, C#, R
Frontend & UI Libraries:	Angular, React, Material UI, Bootstrap, jQuery, HTML, CSS
Backend Development:	Spring Boot, Hibernate, JDBC, Servlets, JSP, RESTful APIs, Microservices.
Databases:	MySQL, PostgreSQL, MongoDB, Cassandra
Cloud & DevOps:	AWS, Docker, Terraform, CI/CD, Kubernetes, Jenkins, Agile, Scrum, SDLC
Big Data Technologies:	Hadoop, Spark
Data Science & AI:	Machine Learning, Deep Learning, TensorFlow, PyTorch
Visualization & Productivity:	Power BI, Tableau, R Studio, Python (Seaborn, Matplotlib), MS Office
Version Control & Tools:	Git, Bitbucket, Jira, Confluence, Postman, Kafka, VS Code, IntelliJ, eclipse.

PROJECTS

- Built a **full-stack** Recipe Management app using React, Spring Boot, and MySQL, with JWT for authentication and BCrypt for password hashing. Implemented role-based authorization, allowing admins or recipe creators to edit/delete recipes. The frontend uses React and Tailwind CSS, while the backend leverages Spring Boot, Spring Security, and MySQL for data management.
- Developed a web application for finding rightful apartments for students in USF where I created a dashboard to compare prices with other apartments, included Map feature, and CRUD functionality for this responsive website, and hosted it on azure and USF myweb server. [Link to website](#)
- Developed an algorithm to predict car resale prices with high accuracy by incorporating car features and market data. Utilized ensemble techniques (stacking, voting) and machine learning models (RF, MLP, GB regressors). Integrated the model into a full-stack application, leveraging Cosine similarity for recommendations. Tools: Python, Postgres, Selenium, BeautifulSoup, JavaScript, HTML, CSS.
- Developed an interactive Tableau dashboard displaying Tampa Bay unemployment trends (1990-2023) across eight counties. Pre-processed data using Python and created visualizations in Tableau to highlight regional employment patterns. [Link to Dashboard](#)

EDUCATION

University of South Florida, Tampa.

Master of Science, Business Analytics, and Information Systems.

Aug 2023 – May 2025

GPA – 3.93/4

National Institute of Technology Warangal.

Bachelor of Technology.

July 2017 – May 2021

CGPA - 8.06/10

ACCOMPLISHMENTS

- Achieved Spot reward by completing project deliverables with accuracy and efficiency using Angular and achieved one more Spot reward for effectively helping in AWS cloud Infrastructure and contributing towards firm initiative at Deloitte USI.
